

CLAIMS

What is claimed is:

1 1. A method of authenticating a user at an un-trusted computing
2 system, the user having at least one portable computing device coupled to a
3 peripheral device, the method comprising:
4 randomly generating a temporary password by the portable computing
5 device;
6 sending the temporary password to the peripheral device;
7 rendering the temporary password by the peripheral device for perception
8 by the user;
9 inputting a password, by the user, into the un-trusted computing system;
10 receiving, by the portable computing device, the password input by the
11 user from the un-trusted computing system; and
12 allowing access to the portable computing device using the un-trusted
13 computing system when the temporary password matches the user-inputted
14 password.

1 2. The method of claim 1, wherein randomly generating the temporary
2 password comprises randomly generating the temporary password periodically.

1 3. The method of claim 1, wherein randomly generating the temporary
2 password comprises randomly generating the temporary password in response
3 to a user-initiated action to the peripheral device.

1 4. The method of claim 1, wherein the temporary password is valid for
2 only a predetermined period of time.

1 5. The method of claim 4, wherein the predetermined period of time is
2 less than one minute.

3

1 6. The method of claim 1, wherein sending the temporary password to
2 the peripheral device comprises sending the temporary password from the
3 portable computing device to the peripheral device over a secure wireless link.

4

1 7. The method of claim 1, wherein rendering the temporary password
2 comprises displaying the temporary password on a display of the peripheral
3 device.

4

1 8. The method of claim 7, further comprising displaying a number of
2 seconds until the temporary password expires on a display of the peripheral
3 device.

4

1 9. The method of claim 1, wherein rendering the temporary password
2 comprises rendering the temporary password audibly for hearing by the user.

3

1 10. The method of claim 1, wherein the password comprises at least one
2 of numbers, letters, symbols, images, and shapes.

3

1 11. The method of claim 1, further comprising detecting initiation of an
2 action by the user to the peripheral device to cause the rendering of the
3 temporary password.

4

1 12. The method of claim 1, further comprising:
2 generating an indicator by the portable computing device;
3 sending the indicator to the peripheral device and the un-trusted
4 computing system;
5 rendering the indicator by the peripheral device for perception by the user;
6 rendering the indicator by the un-trusted computing system for perception
7 by the user;

8 wherein the user inputs a password only when the indicator rendered by
9 the peripheral device matches the indicator rendered by the un-trusted
10 computing system the user desires to use.

11
1 13. The method of claim 1, wherein the peripheral device is at least one
2 of worn by the user and carried by the user.

3
1 14. The method of claim 1, wherein the portable computing device and
2 the un-trusted computing system communicate over a wireless link.

3
1 15. An article comprising: a storage medium having a plurality of machine
2 readable instructions, wherein when the instructions are executed by a
3 processor, the instructions provide for authenticating a user of an un-trusted
4 computing system, the user having at least one portable computing device
5 coupled to a peripheral device, by randomly generating a temporary password by
6 the portable computing device, by sending the temporary password to the
7 peripheral device, by receiving at the portable computing device a password
8 input by the user from the un-trusted computing system, and by allowing access
9 to the portable computing device using the un-trusted computing system when
10 the temporary password matches the user-inputted password.

11
1 16. The article of claim 15, wherein instructions for randomly generating
2 the temporary password comprise instructions for randomly generating the
3 temporary password periodically.

4
1 17. The article of claim 15, wherein the temporary password is valid for
2 only a predetermined period of time.

3
1 18. The article of claim 17, wherein the predetermined period of time is
2 less than one minute.

3

1 19. The article of claim 15, wherein instructions for sending the temporary
2 password to the peripheral device comprise instructions for sending the
3 temporary password from the portable computing device to the peripheral device
4 over a secure wireless link.

5
1 20. The article of claim 15, wherein the password comprises at least one
2 of numbers, letters, symbols, images, and shapes.

3
1 21. A system for authenticating a user desiring to use an un-trusted
2 computing system comprising:
3 a portable computing device; and
4 a peripheral device, coupled to the portable computing device, capable of
5 rendering a password for perception by the user;
6 the portable computing device comprising:
7 a random password generator to randomly generate a temporary
8 password;
9 a memory to store instructions and data; and
10 a processor to execute the instructions obtained from the memory
11 to send the temporary password to the peripheral device for rendering to
12 the user, to receive from the un-trusted computing system a password
13 input by the user; and to allow access to the data by the un-trusted
14 computing system when the temporary password matches the user-
15 inputted password.

16
1 22. The system of claim 21, wherein the peripheral device comprises a
2 display and renders the password by displaying the password on the display.

3
1 23. The system of claim 21, wherein the portable computing device
2 communicates with the peripheral device over a secure wireless link.

3

1 24. The system of claim 21, wherein the portable computing device
2 communicates with the un-trusted computing system over a wireless link.
3

1 25. The system of claim 21, wherein the random password generator
2 randomly generates the temporary password periodically, the temporary
3 password valid for only a predetermined period of time.
4

1 26. The system of claim 21, wherein the peripheral device is capable of
2 being at least one of worn and carried by the user.
3

1 27. The system of claim 21, wherein the peripheral device comprises an
2 input mechanism activation of which initiates rendering of the password by the
3 peripheral device.
4

1 28. The system of claim 21, wherein the peripheral device comprises an
2 input mechanism activation of which causes the portable computing device to
3 randomly generate a new temporary password.
